

New Features in Weld Management Software, Ver. 2.0

techMatrix, LLC of St. Paul, MN today announced version 2.0 of its WeldWorks™ Software Suite. The new upgrade includes many customer driven features like:

- The ability to search and export weld records based on machine, operator, lot number or time period
- Histogram, box-plot, and SPC charts that offer row-by-row data selection granularity within the integrated statistics module
- Zoom and scroll graphing capability has been added to the client for improved weld process signature analysis
- The base database storage size has been increased from 4GB to 10GB

WeldWorks software continues to enhance its feature set and grow its customer base across the globe. The software is designed to be a versatile weld management solution that unlocks critical process data in today's resistance weld controllers and monitors.

The software suite can be deployed on-site or hosted by techMatrix. WeldWorks is fully scalable from one system to dozens of systems across multiple facilities. Either way, manufacturers serious about resistance weld quality can fully satisfy their traceability requirements while continually improving their weld processes. The secure, centralized database can be accessed and shared anywhere with a PC and web browser.

About techMatrix, LLC:

Founded in spring 2005, techMatrix LLC is a dynamic growth stage company dedicated to designing, building, and assembling both custom and standard PC based micro-joining weld equipment in the medical device, aerospace, and electronic industries.
